

CARAMÊS FULL ARCH CLINICAL EXPERIENCES - FROM SIMPLE TO COMPLEX

STRAUMANN PRO-ARCH

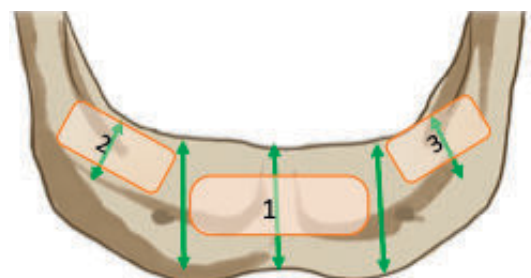

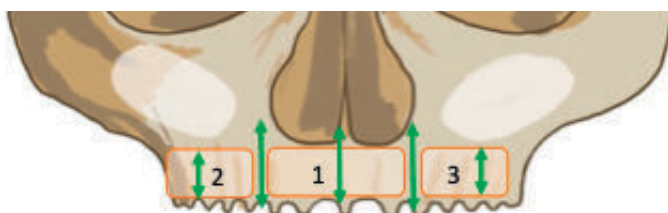

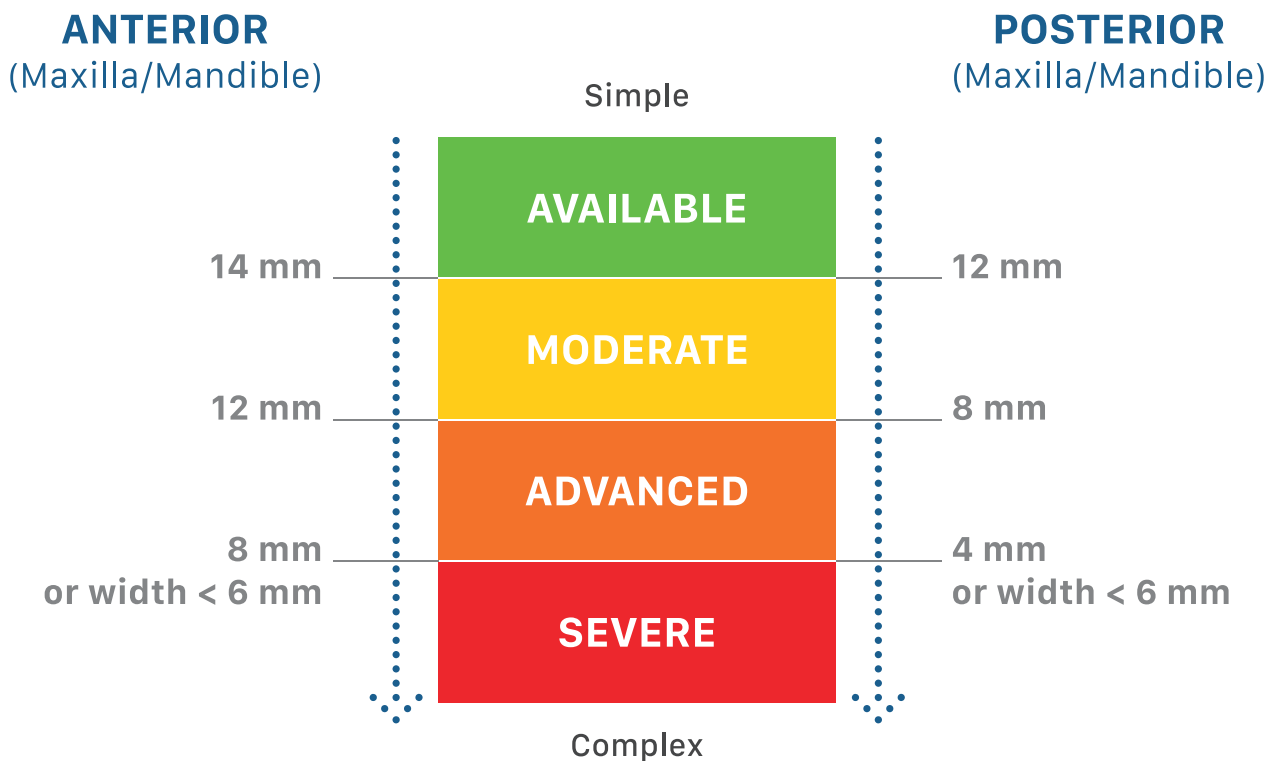

27th and 28th of October, 2025

Lisbon · Portugal

COURSE OVERVIEW

The rehabilitation of edentulous jaws with immediate loading of osseointegrated implants has been proven to be a predictable treatment over time. Straumann® Pro Arch full arch rehabilitations were designed to enable personalized treatment of edentulous patients, taking into account each individual's expectations, clinical situation, and financial capabilities.

Patient-specific treatment protocols are based on the vast experience and anatomic classification developed by **Prof. João Caramês**, who hosts the course. Treatment planning, from analogical to digital and decision making strategies need to consider several factors such as patient selection, implant distribution, number of implants, implant type, rehabilitation design and soft tissue management.

LEARNING OBJECTIVES

The learning objective of the course is to provide theoretical training and practical experience to successfully manage immediate loading treatment according to the Straumann® Pro Arch surgical and restorative protocol.

The program will include discussions about modern technologies, surgical and prosthetic techniques, same day immediate loading and clinical evidence in the field of immediate full arch restorations. The team of experts from the Implantology Institute® will lead the conversations and will answer the questions. The course will take place for two days with theoretical lectures, live surgery and Hands-on practice.
